

Hydrothermal Breccia: fine grained galena with late replacing galena, sphalerite and argentite, with chalcopyrite possibly containing high grade Au.

Length (m)	Au (ppm)	Ag (ppm)	Cu (%)	Pb (%)	Zn (%)
0.75	31.7	1,104	0.5	26.4	14.1

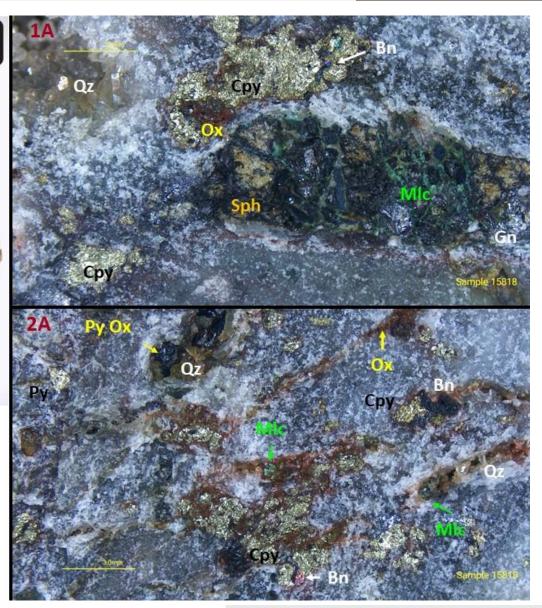

Hydrothermal / Crackle Breccia: Quartz veining controlling emplacement of massive sulphides composed of galena, sphalerite, acanthite/argentite, chalcopyrite, bornite and pyrite, with supergene oxidation of Cu sulphides like malachite and covellite

Length (m)	Au (ppm)	Ag (ppm)	Cu (%)	Pb (%)	Zn (%)
1.25	2.44	623	0.1	0.3	0.8

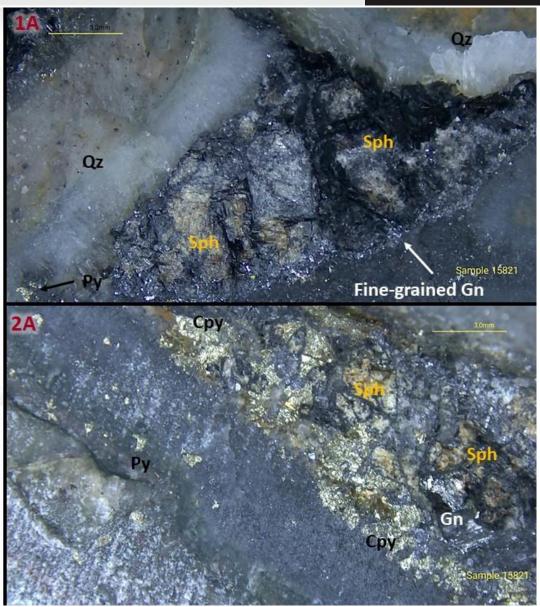

Hydrothermal Breccia: Quartz and silicification alteration with massive and disseminated sulphides composed of galena, sphalerite, acanthite and high grade Au

Length (m)	Au (ppm)	Ag (ppm)	Cu (%)	РЬ (%)	Zn (%)
2.00	18.9	395	0.6	1.9	11.4

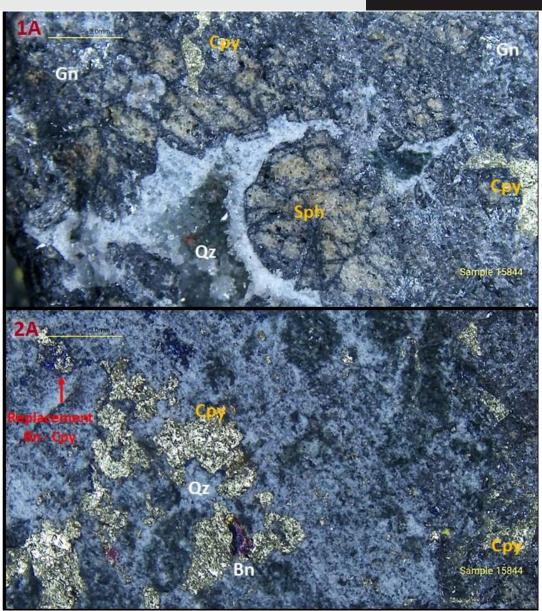

Hydrothermal Breccia: Quartz and massive sulphides cementing silicified wallrock fragments. Sulphides composed of galena, sphalerite, pyrite and late replacing chalcopyrite possibly containing high grade Au

Le	ngth (m)	Au (ppm)	Ag (ppm)	Cu (%)	Pb (%)	Zn (%)
	1.00	37.5	287	1.1	0.5	1.1

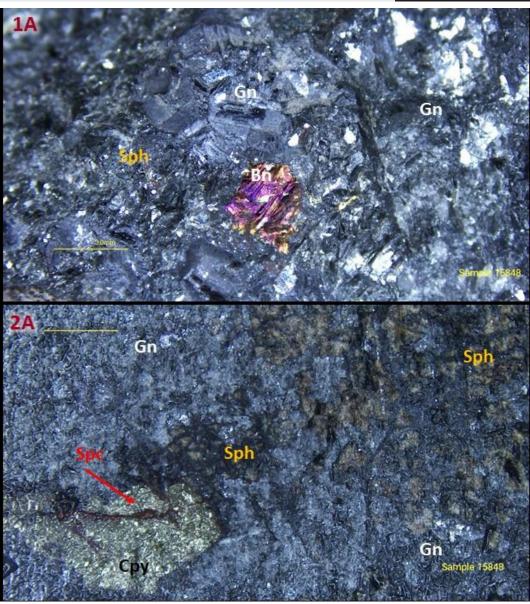

Hydrothermal Breccia: Gray silica replacement and massive sulphides matrix composed of galena, sphalerite, chalcopyrite (+/- specularite), and bornite with high grade Au

Length (m)	Au (ppm)	Ag (ppm)	Cu (%)	Pb (%)	Zn (%)
1.00	10.4	136	0.4	8.0	14.6

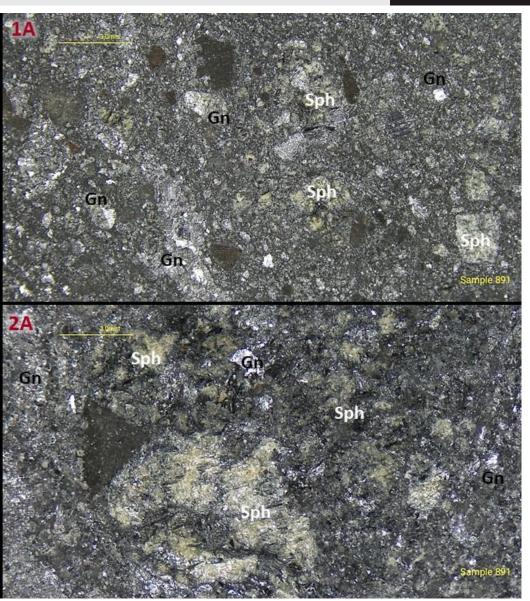

Hydrothermal Breccia: Selective sample of typical Plomosas Breccia containing fine grained massive galena with late replacing event of coarse galena and sphalerite with anomalous Ag-Au

Length (m)	Au (ppm)	Ag (ppm)	Cu (%)	Pb (%)	Zn (%)
XRF	4	59	0.02	7.33	12.32
